THANK YOU FOR BUYING THE CLASSIC PRESETS!

HOW TO INSTALL THE PRESETS AND PROFILES

1. Open Lightroom CC or Classic CC.
2. Import all the profiles and presets. From the menu bar, choose File > Import Profiles & Presets. In the Import dialog that appears, navigate to your downloaded folder and select all XMP-files.
3. Your XMP-files will be stored under the following directions. Backup them, as well as your Lightroom Catalogue.

Windows

C:\ProgramData\Adobe\CameraRaw\Settings

Mac OS X

/Users/**YOUR USER NAME**/Library/Application Support/Adobe/CameraRaw/Settings

Don't be surprised, ProgramData and Library are both hidden folders.
You need to tell your operating system to show hidden files and folders.

Forgive me, that there is no installation routine. Trust is important to me and I want you to know exactly which files will end up on your computer.
If there should be any difficulties, I will be glad to help. Write me a mail to **presets@andreduhme.de**. Thanks!

HOW TO INSTALL THE HALATION ACTION

IMPORTANT
The action is language specifc. You have to use Photoshop in English language, if you want to use the action, but you can recreate the action for your own language version, if you like. Scroll down if you want to know how.

1. **Open the Actions Panel:**
- Launch Photoshop.
- Go to **Window > Actions** to open the Actions panel.
- The panel will typically appear on the right side of your workspace.

2. **Load the Action File:**
- In the Actions panel, click the **menu icon** at the top-right corner of the panel.
- From the dropdown menu, choose **Load Actions...**.
- A file browser will open. Navigate to the location of your *.atn file, select it, and click **Load**.

HOW TO USE THE ACTION

1. Select the layer, which you want to edit with the halation.
2. Select the halation action in the action panel and click the play button.
3. Choose the whitest part of the image by defining the threshold level. Click ***Ok***.
4. After the action is done, there are options to edit some details. For example the best radius for the blur effect is the amount of megapixels of you sensor. Sometimes a more orange color looks more authentic. To make the halation look authentic, it helps to understand what each layer created by the action does. Additionally, it is advisable to study and analyze halation on real film to observe when, where, and how strong it occurs. Feel free to play around!

How to Manually Create a Halation Effect in Photoshop

1. **Duplicate the current layer**:
   - Press `Ctrl + J` (Windows) or `Cmd + J` (Mac) to duplicate the background layer.

2. **Add a Threshold adjustment layer**:
   - Go to **Layer > New Adjustment Layer > Threshold...**.
   - Set the Threshold level to **128**.

3. **Adjust the Threshold layer**:
   - Double-click on the Threshold layer icon in the Layers panel.
   - Change the Threshold level to **246**.

4. **Select the “Background Copy” layer**:
   - Click on the duplicated background layer created in step 1.

5. **Apply a Gaussian Blur**:
   - Go to **Filter > Blur > Gaussian Blur**.
   - Set the Radius to **18 pixels**.

6. **Set the layer blending mode to “Linear Dodge (Add)”**:
   - In the Layers panel, change the blending mode of the layer to **Linear Dodge (Add)**.

7. **Add a Solid Color fill layer**:
   - Go to **Layer > New Fill Layer > Solid Color...**.
   - Select a color with the following values:
     - **Red: 255**
     - **Green: 19**
     - **Blue: 19**
   - Set the blending mode of this layer to **Linear Burn**.

8. **Convert the current layer to a Smart Object**:
   - Right-click on the current layer and select **Convert to Smart Object**.

9. **Create a Clipping Mask**:
   - Right-click on the solid color fill layer and select **Create Clipping Mask**.

10. **Add a Curves adjustment layer**:
    - Go to **Layer > New Adjustment Layer > Curves...**.
    - Adjust the curve points as follows:
      - Point 1: **Input: 0, Output: 0**
      - Point 2: **Input: 26, Output: 157**
      - Point 3: **Input: 70, Output: 239**
      - Point 4: **Input: 161, Output: 228**

11. **Verify optional steps**:
    - Ensure the layer arrangement and modifications match the original action settings.

12. **Save the action (optional)**:
    - Go to **Window > Actions**, click on the Create New Action button, and record these steps for future use.
